Recommendations on Academic Data

- Provide success & retention numbers as an aggregate
- Have data for the courses within the specific program, instead of individual data sets for courses within each subject matter.
- The data files are great. They do help. In my area, it would be helpful to also have information regarding students and faculties' needs.

Improving Program Review Process

- More time, fall is too busy
- Data could be more user-friendly, SPOL issues
- Get a more user friendly and intuitive planning software
- Identify budget enhancements prior to the adoption of the budget in May
- Get specific feedback on our program reviews from administration after the process is done
- Have my supervisor meet with me more often to discuss objectives and SWOT

Improving Budget Enhancement Process

- We need to restructure this because at the end high priorities never get funded
- Only fund the items that go through program review, respect the process
- Limit participatory governance involvement to the subject matter experts and administration when it comes to prioritizing funding
- Include area for justification for additional budget, and more concrete and specific feedback on why budget requests were denied

Evaluating SPOL

- A more visually appealing system, one in which reports are readily available
- SPOL serves its purpose, we lost the accreditation warning we had after we implemented it
- Not a fan of SPOL, but this is the same across other CCC that they are all unhappy about their tools
- All tools will be the same, we need to value what program review brings to each program to make sure we take full advantage of this planning process
- User-friendliness is key in any new software

Recommendations

- Revise datasets to meet current needs
- Provide more training on planning tool software
- Evaluate SPOL and other options for planning/assessment
- Other – please provide input
